

WeRateDogs

.act_report

The WeRateDogs twitter project is a collection of data about dog names ,stages , image urls and more.
Ending up with 3 data frames after gathering , assessing,cleaning and merging when end up with a combined ***"twitter_archive_master.csv"*** dataframe.After passing certain questions like :

- We noticed that most of our tweets came from ***iphone***

doggo

floofer

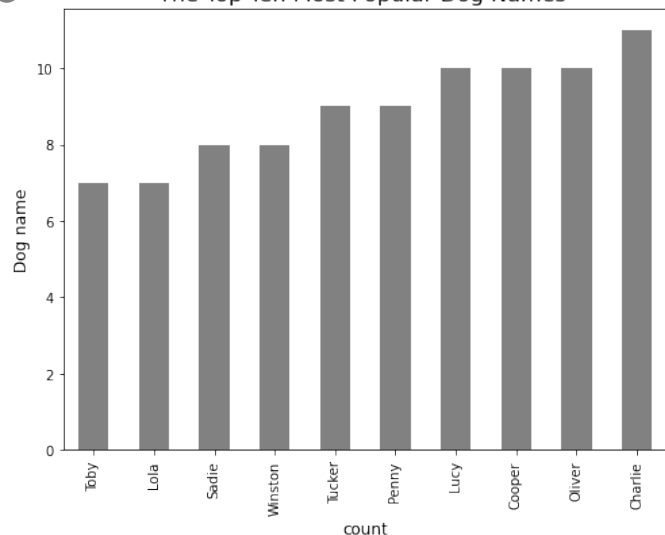

pupper

puppo

201

The Top Ten Most Popular Dog Names

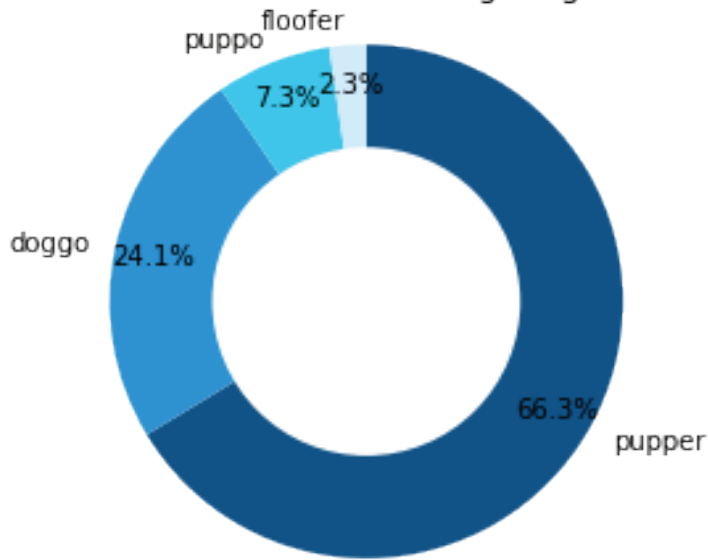

Total dog stage count : 303

- In this data me find that we have **4 dog stages** with most dog in our data been in the ***pupper stage***

And also the most popular dog names on this graph plotting the ***"Top ten most popular dog names"*** was

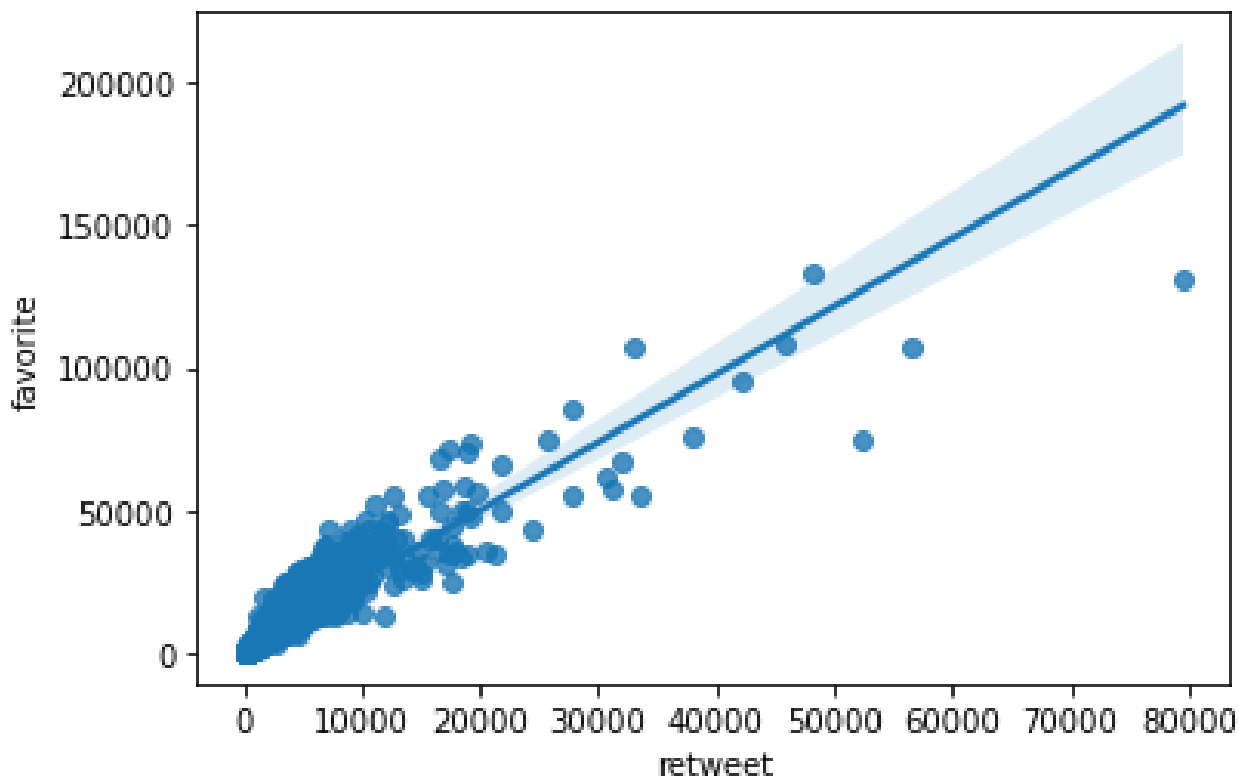

Charlie is most popular

The Most Common Dog Stage

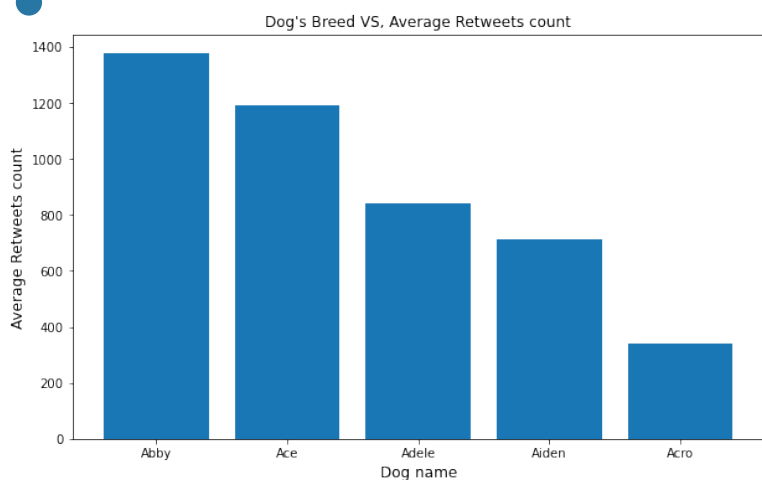

We can also see that the doggo and pupper dog stages make up about

90%
our data frame

On plotting retweets on favorites counts we had a **positive correlation** this implies that as retweets increase the favorite counts increase too

The Dog with the most Average Retweets count retweeted Dog was

On average
Abby was most retweeted
